

Join millions of others! Take these *actions* this month.

Test drive an electric car. Nissan Leaf, Chevy Volt, BMW i3, Tesla...

Figure out how many miles you drive on most days.

Does all electric (Leaf) or extended range electric (Volt) fit best in your life?

Tell your car dealer, "*I want my next car to plug-in!*"

Get a home or business energy audit.

Follow the cost-effective recommendations.

Audit should include blower door tests with an infrared camera.

Install at least 1 LED in your most used light socket.

1. All the advantages of old incandescents. Prices falling fast.
2. PLUS - extremely long life (25 X) and much less energy used
3. Buy a few bulbs at a time at Home Depot, Amazon, etc.

Stop buying new and recycle all compact fluorescent bulbs.

Get a bid on solar electric.

3 Ways to Go Solar:

1. Solar Purchase

2. Solar Lease

- No or low money down
- May cost LESS than current electric bill

3. Shared Solar Garden or Community Solar

Tell your realtor & builder, "*My next home will be solar or solar-ready!*"

Install solar with batteries or *battery-ready*.

Solar plus excellent insulation & windows allows you to live in a ***super-comfortable net zero energy home.***

Investigate air and ground source heat pumps.

If you are installing a new furnace, or heat with electricity or propane.
